Logging & Monitoring (S4)

Monitor Cluster Components

- Kubernetes doesn't have own monitoring solution
 - Other open source solutions like Prometheus, elastic stack, etc. work
 - Metrics Servers
 - As in memory solution
 - o Kubelet cAdvisor retrieves performance metrics and exposes them to kubeApi
 - o Get from github and deploy with kubectl create
 - o Kubectl top node to view metrics of nodes
 - Kubectl top pod

Managing Application Logs

- Docker: docker logs [-f] <containerid>
- Kubernetes:
 - o kubectl logs [-f] <pod-name>
 - o with multiple containers: kubectl logs [-f] <pod-name> >containerid>
